

IL 18-3

Uniprot ID: [Q14116](#)

Protein name: IL18_HUMAN

Full name: Interleukin-18

Protein existence: evidence at protein level

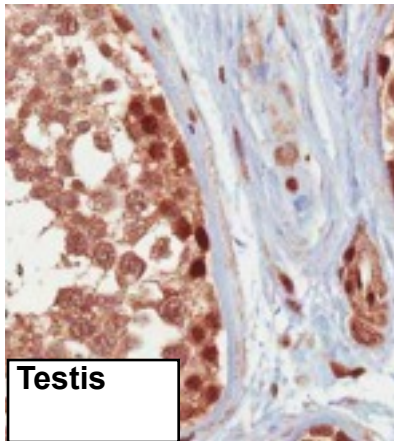

Function: Augments natural killer cell activity in spleen cells and stimulates interferon gamma production in T-helper type I cells.

Subcellular location: Secreted.

One antibody: IL18-3 was tested. IL18—3 was failed for IHC.

IL18-3 (CAB047361)

Fail

Immunohistochemistry

IHC protocol: HIER pH 6, Dilution 1:1600

IHC test staining: Strong nuclear staining with cytoplasm as background.

Western blot

WB Size markers (kDa): 250, 130, 95, 72, 55, 36, 28, 17, 11

WB Lanes: Marker(1), RT-4(2), U251 MG(3), Plasma(4), Liver(5), Tonsil(6)

WB Target weight (kDa): 22, 22, 22

WB Validation: Not supportive (Weak band of predicted size but with additional bands of higher intensity also present)
